

# MEGAFLOW VENTURI SYSTEM

## Product Description

This special tool is designed for the MEGA FLOW valve which is available for all our dunnage air bags.

This fully proved system, that eliminated operator error, can fill your dunnage air bag 30 to 40% faster than any other compressed air filling system!

The special designed venturi MEGA FLOW inflater leads the air stream in a special chamber and create a vacuum to suck additional outside air into the bag.

Inflating of dunnage air bags has never been easier and faster than with our new fast filling MEGA FLOW inflation tools.

## Industries Served

- Logistics
- Engineering and Machinery
- Power and Refinery

## Key Features

- Fills dunnage air bag 30%-40% faster than any other compressed air filling system.
- Capable of eliminating operator error

## Product Guidelines

- Press the handle to open the fork and apply it to the Mega Flow valve.
- Release the handle when the inflator is on the valve to open it. The entire bag can be lifted up easily with this inflator.
- Open the hand slide valve (blue) on the inflators end to start inflating. The bag will inflate very quickly.
- When the bag start building up pressure, the over flow air stream will come out from the top opening of the inflator.
- To built up more pressure in the bag, simply close the top opening with your hand for a few seconds.
- When the bag have reached your desired filling presure, press the inflator handle again and the MegaFlow valve will close automatically.
- Finally, remove the inflator from the valve and close the blue hand slide valve.
