

SHRINK FILM

Product Description

Shrink Film, also known as Stretch Film, is commonly used to wrap and package food and beverages. Food and beverages are sensitive products which requires additional preparation when shipping and storing such goods. For long shipping transits, food are stored in shipping containers for a long period of time which provides opportunities for contamination and spoilage of goods. The product itself has an expiration date, some food requires specific environments to maintain its quality, and other unforeseen circumstances may occur such as damage to the goods from impact, etc.

Thus, when shipping sensitive goods such as food, many precautionary measures have to be taken. Before adjusting the environment to prevent food from spoiling, getting damaged or contaminated, food has to be wrapped and packaged well to be shipped.

So how do suppliers package food?

Some food packaging examples include; Bags, cans, cartons, Aseptic Processing, wrappers and much more. Stream Peak offers a variety of food packaging solution for seamless food packaging and secure shipping. We offer Shrink Films at an affordable price and in bulk quantities.

What is Shrink Film?

It is a type of plastic film that is thin, flexible and elastic, making it possible to wrap any type of product regardless of the shape and size. It is transparent and stretchable, providing a layer of protection of any good, mainly used for food.

Industries Served

- Pharmaceutical
- Food & Fruits
- Retail
- Electronics
- Logistics

Stream Peak's Film

Stream Peak's film is specially designed for packaging food such as vegetable, fruits, meat and cheese. It is ideal and suitable for packaging food due to its special properties such as;

1. The film only allows the transmission of Carbon Dioxide (CO₂) and Oxygen (O₂). By restricting the flow of gases, the film is able to protect food from unwanted contamination from other gases and its surroundings. During shipment, many common substances such as dust, moisture and dirt will surface and pose a threat to food and beverages. This will extend the food's shelf life and ensure the food is able to last through long transits in the right environment.
2. Stream Peak's Shrink Film is specially formulated with a unique Antifog formula which prevents water condensation and water droplets from surfacing onto the film. Water condensation within the packaging may affect the product quality, taste and texture.
3. Our film is strong, elastic and durable, ensuring secure wrapping of the product throughout transit. Flexible and versatile, the film is able to wrap and package a wide variety of food regardless of the shape and size. With its tough and tear resistant properties, Stream Peak's Shrink Film will ensure the product is shipped safely.

Key Features

- Cost Effective
- Environmentally Friendly
- Aesthetic Packaging
- Strong & Durable
- Flexible & Elastic
- Specially formulated, optimal food packaging
- Maximise food protection & Maintain quality
