

THERMAL LINER

Product Description

Designed for the insides of Dry Van shipping containers. To protect cargo from damage which may be caused by changes in the levels of humidity and temperature during the transportation period.

Thermal Liner helps to maintain the temperature within the cargo by insulation, maintaining a 10-20 degree celsius difference between the interior and the container itself. In addition, it prevents condensation that may form within the container from dripping onto the products which may result in mould and corrosion.

Lastly, It protects from odour and dirt which significantly reduces the costs to clean the interior of the container. Thermal Liner protects both the contents within the container as well as the container itself. It assures an easy and toolless assembly time of as little as 3 minutes and can be used in any standard shipping container. The cover can be used for an array of products varying from food, drink and chemicals to clothing, vehicles and machinery.

There are 4 types of EMBATUFF containers:

EMBAPANEL (Reusable) without floor- Isolation Ranks: Extreme

EMBATUFF 130 (Reusable) - Isolation Rank: Maximum

EMBATUFF 55 (Reusable) - Isolation Rank: High

EMBATHERM (Not Reusable) without floor - Isolation Rank: Medium

Industries Served

- Aerospace And Defense
- Apparel And Accessory Packaging
- Electronics
- Hardware and Fasteners
- Healthcare
- Hobby and Craft
- Household Products
- Personal Products
- Pet Products
- Toys
