

TUBULAR DESICCATORS

Product Description

Tubular desiccators are ideal for preventing corrosion, dampness, and contamination in electronic and optical equipment. It does not incorporate a humidity indicator, but can be fitted to a separate humidity indicator or panel mounting plug onto equipment.

Containing a moisture adsorbing desiccant, either silica gel or molecular sieve, reduces relative humidity to acceptable levels. Molecular Sieve is highly recommended to be used in the desiccator to adsorb moisture, especially when the equipment is extremely sensitive to water vapour condensation and operates at low temperatures.

Industries Served

- Electronics
- Healthcare
- Personal Products
- Pharmaceuticals

Key Features

- Incorporates humidity indicator
- Variety of models available
- Non-refillable desiccators are disposable

Product Specifications

Tubular Desiccators are available in the following models:

- 2g - 8g Molecular Sieve & Silica Gel Non-refillable Desiccator with Unified Thread
- 2g - 8g Molecular Sieve & Silica Gel Non-refillable Desiccator with Metric Thread
- 2g - 8g Molecular Sieve & Silica Gel Non-refillable Desiccator with Metric Thread (Long)
- 2g - 8g Molecular Sieve & Silica Gel Non-refillable Desiccator with Unified Thread (Long)
- 10g - 15g Molecular Sieve & Silica Gel Refillable Desiccator with Metric Thread
- 25g - 45g Molecular Sieve & Silica Gel Refillable Desiccator with Metric Thread
- 4g Molecular Sieve Refillable Desiccator with Metric Thread
- 12g Molecular Sieve Refillable Desiccator with Metric Thread
